Hi Tom,  
Thanks for the update. Would it be possible for you to send me the spreadsheets as they existed when you originally submitted the reports anyway? We were asked by a member of the public for the spreadsheets a few weeks ago so they can evaluate the tug projects. Since the clock for the public comment period on our permit and our own clock to review the tug project are ticking away, it might be helpful if we could just look at the current spreadsheets and then get the update later. If you don't get the issues worked out with CARB and State Lands and update the spreadsheet by the time you leave for vacation, could you send the current files? Thanks and I hope you enjoy your vacation.

RE: Olympic Engine Repower Report

Joe: Just to let you know, I am not ignoring your request. We are working through a slew of questions from CARB and State Lands and I don't want to send you the spreadsheets until I am sure that there are no changes coming out of the discussion or we have incorporated changes that are identified.

I am out next week on vacation so if we don't reach resolution tomorrow (my goal), then look for these early the week of the 17th. Also, please feel free to send me another reminder if you don't see them by Tuesday the 18th.

Thanks.

Tom

Hi Tom,  
As suggested in your e-mail below, this is a reminder regarding the spreadsheets for the tug reports.

Also, CARB received some information from Selas Fluid Processing about the submerged combustion vaporizers that is inconsistent with the permit application and the proposed permit. Specifically, the application says that the SCVs are rated at 115 MMBtu/hr but according to the information supplied by Selas, the actual rating is 120 MMBtu/hr. Could you clarify where the number in the application came from and also confirm that the model used for Cabrillo Port will be the Selas Sub-X-120 (note that the "120" is not specified in the application)? Similarly, CARB also noted that the latest emission spreadsheets for the Wartsila engines (<http://www.epa.gov/region09/liq-natl-gas/docs/StoelRives-ltr-toEPA4-7-06.pdf>) states that the rating of the engines is 8250 kW but the technical specification sheets provided by Wartsila indicate that the

rating is actually 8550 kW. Can you clarify this as well?

If the ratings provided in the emission spreadsheets for both the engines and the SCVs are nominal ratings, it might be helpful to know what the emission profile is like at maximum load for each piece of equipment. Thanks,

Joe

Joe: I will get copies to you. If you don't see them by Wednesday (I am out Monday), feel free to send me a reminder email.

Could I ask for a document in return from you? I know that Region 9 has an air permit application checklist that I have gotten before. I can't find my copy. Any chance of your emailing me a copy of it?

Thanks.

Hi Tom,

Both the Olympic and Sause Brothers tug reports have several spreadsheets. Would it be possible to get electronic copies of the actual Excel or other spreadsheet files used to create them? Thanks,
